

QMainWindow

```
classDiagram
    QMainWindow <|-- menu
    class QMainWindow {
    }
    class menu {
        + menu()
        + ~menu()
    }
```

The diagram illustrates a class hierarchy. At the top is the 'QMainWindow' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'QMainWindow', while the other two are empty. Below it is the 'menu' class, represented by a rectangle with three horizontal compartments. The top compartment is shaded gray and contains the name 'menu'. The middle compartment is also shaded gray and is empty. The bottom compartment is shaded gray and contains two public methods: '+ menu()' and '+ ~menu()'. A blue arrow with an open triangular head points from the 'menu' class up to the 'QMainWindow' class, indicating that 'menu' inherits from 'QMainWindow'.

menu

+ menu()
+ ~menu()
